Health camp on Hemoglobin testing in blood

Conducted by

K L E F Women's forum on 27th June 2020

KLEF Women's forum conducted health camp on "Hemoglobin Testing in Blood" Programme for the faculty, Staff on 27.06.20 at C Block Room no C-511 Bio-Tech Lab from 11.00AM to 01.00PM.

A hemoglobin test measures the amount of hemoglobin in your blood. Hemoglobin is a protein in your red blood cells that carries oxygen to your body's organs and tissues and transports carbon dioxide from your organs and tissues back to your lungs.

If a hemoglobin test reveals that your hemoglobin level is lower than normal, it means you have a low red blood cell count (anemia). Anemia can have many different causes, including vitamin deficiencies, bleeding and chronic diseases.

The normal range for hemoglobin is:

- **For men**, 13.5 to 17.5 grams per deciliter
- **For women**, 12.0 to 15.5 grams per deciliter
